Towing
solutions

Gleistein

Your job, our rope

Towing line solutions from Gleistein are always geared to meet the individual practical demands. On the following pages, a tried-and-tested towline combination will be used as an example to show the contribution we can make to your job!

Main towing line: TowMaster

- **Our top seller:** extremely robust towing line with perfect shock absorption characteristics. Also a first-class forerunner in other combinations!
- **Does it all:** high-strength polyester multi-core rope with right level of stretch
- **Durable:** extremely abrasion-resistant cover provides protection and stability
- **Torsion protection:** longitudinal stripes make twists in the rope immediately visible

NFC chips

- **Well connected:** For many years Gleistein has been deploying NFC chips in its ropes that can be read with a smartphone.
- **Always available:** specifications, inspection intervals, article numbers, etc.
- **Robust:** completely unaffected by salt water and securely whipped in the line
- **Cost effective:** can be incorporated in any line

GeoLink

Lashing Soft shackle in signal yellow colour – here as a triple lashing (R3). Child's play to fasten, holds securely and easy to open again each time.

- **Safe handling:** injury-free one-person handling
- **Highest precision:** suitable as a sacrificial element due to precisely defined breaking load
- **Marked pressure points:** enhances safety due to exact positioning

Forerunner: X-Twin Dyneema® SSC Cover as a grommet

- **Our recommendation for the most highly stressed component of the ensemble:** high-performance rope with Dyneema® SSC cover spliced to the grommet. Unrivalled abrasion resistance and distributed wear due to possibility to reposition several times
- **Torsion free:** the paired rope strand protects against twisting
- **More economical** than an eye-eye configuration – especially for smaller lengths

More than ropes.

Also strong in permanent mooring solutions

Bio-based Dyneema® fibre

Green

A carbon footprint that is 90% lower than generic HMPE

As strong as ever

Boasts the exact same characteristics, specifications, and performance as conventional Dyneema®

Certified

Entire process is certified for compliance according to the International Sustainability and Carbon Certification (ISCC)
