

NFC inside

Keeps you in the know

Product
sheet

Your job has just become clearer and easier. Thanks to the integration of the latest NFC (Near Field Communication) technology in the rope, all relevant information is now at your fingertips. A simple contactless scan is all that is needed to have the information displayed on any Android or iOS smartphone.

Your crew now enjoys instant access to the precise rope specifications wherever you are in the world, ensuring maximum safety and protection in all situations, including routine servicing or necessary replacements.

The NFC tag delivers information on:

- ▶ Rope information including: type, length, diameter, (spliced) break load, Gleistein article number, production date, lot number
- ▶ Recommended service intervals
- ▶ Relevant certifications
- ▶ Gleistein Ropes contact details
- ▶ Link to installation advice (on some models)

A distinctive whipping designates the area of the rope where the NFC tag is conveniently and securely integrated.

More than Ropes.

Gleistein
